Jumper Settings for Backlight Illuminations

(For CP-34GBZ-LB/CP-34GPBZ-LB)

Jumper at JP1 Position

Backlight changes from blue to red after the glass or plastic element is broken.

Jumper at JP2 Position

Backlight changes from blue to green after the glass or plastic element is broken.

Routine Testing

Model: CP-34GP

Open the clear plastic cover. Insert the test key into the hole so that the plastic glass will tilt to one side and the internal switches will then change status from NC to NO. Remove the test key so that the switches revert back to NC status.

Operation Instructions

Model: CP-34G

Model: CP-34GP

Open the clear plastic cover. Press harder to break the plastic glass so that the internal switches will change status from NC to NO, triggering the connected devices.

* Remove the screw in the front of the call point and replace the plastic glass. The switches will then revert back to NC status.
